Status: REG REF

Exam(s)/Accession No(s):
MG Screening Mammo Bilateral
C003207349MOM
MG Screening Mammo Bilateral

Report Status: Signed

INDICATION:
Screening.

COMPARISON STUDY:
January 9, 2017 and December 3, 2014.

FINDINGS:
Scattered fibroglandular tissue is again seen in both breasts. There is no evidence of a dominant mass lesion, distortion of tissue architecture, or suspicious microcalcifications within either breast to suggest presence of a malignant lesion.

OPINION:
No significant interval change. No mammographic evidence of malignancy. If routine screening is planned, follow-up mammogram is recommended in 24 months time.
BI-RADS 1

Reported and Electronically Signed By: Dr. Charlotte Lobo

This report is generated in a voice recognition system and is considered authenticated when electronically signed by physician.
